Hydrotherapy Centre

Open day at Flawborough Equine

Saturday 13th June, 12 noon to 3pm in association with

Alternative therapy for horses is a rapidly evolving field and there are many tools of rehabilitation.

Flawborough Equine Hydrotherapy Centre offers the very best in injury treatment and prevention using cold salt water hydrotherapy as well as an extensive range of alternative therapies.

Equine enthusiasts will be given a unique opportunity to explore the extensive range of treatments and therapies available at the Open Day on Saturday 13th June.

- Seminars
- Demonstrations
- Tours
- Displays
- Practical advice

Visitors will discover how effective treatments can be in accelerating healing and repair over a wide range of lower leg conditions when used alone or in conjunction with conventional veterinary treatment.

Thorough veterinary evaluation should always precede the use of any therapeutic procedure and the importance of the accuracy of diagnosis to a successful outcome of treatment will be discussed.

Whether you are a leisure or performance rider, amateur or professional - there's sure to be something to interest you.

• Emma Hawthorne - Flawborough Equine

Emma Hawthorne, Director of Flawborough Equine will explain the benefits of hydrotherapy and visitors will see the Spa in action. "We offer hydrotherapy along with an extensive range of complementary therapies delivered by talented professionals" says Emma, "many of whom will be participating in the Open Day offering the opportunity to see treatments in action and allowing one-to-one discussions."

Sponsors, Dengie will highlight the importance of an effective feeding regime during rehabilitation from injury or illness. Katie Williams - Equine Nutritionist from Dengie Horse Feeds - will discuss how this can be achieved. Responsible for managing the nutrition team at Dengie, she also over-see's the development of the Dengie range of feeds.

• Katie Williams - Dengie Horse Feeds

"There are two important aspects to feeding a horse during rehabilitation from injury or illness" says Katie, "firstly it is important to supply the nutrients that a horse needs to rebuild damaged tissues or fight infections but it's equally important to ensure that they are supplied in a form sympathetic to the horse's digestive system - particularly if confined to the stable for prolonged periods". Katie's talk will also include a tour through the horse's digestive system using a life size gut.
